# Dalhousie Food Service Ware Procurement Guidelines Halifax Campuses

Issued by the Office of Sustainability Dalhousie University

June 2017

#### Introduction

Dalhousie seeks to achieve 70% waste diversion by 2020 and reduce the weight of waste created per campus user. Significant waste diversion efforts require the participation of all campus stakeholders.

The best way to reducing packaging waste is to provide and encourage reusable items. This includes offering metal spoons at coffee stations instead of disposable stir sticks, providing ceramic mugs for sit-in coffee, and supporting a reusable container exchange program. The next best choices for dining ware are compostable products and then recyclable products. Chosen items should align with the sorting guidelines of Dalhousie University and the municipality.

With many packaging types on the market, both customers and waste processing facilities have difficulty appropriately sorting food service packaging. These guidelines are intended to communicate the optimal single-use packing items for food services at Dalhousie and provide examples of packaging items that are difficult to sort, not accepted by the municipality's composting or recycling facilities, and/or are garbage and thus should be avoided.

#### What is Compostable?

Dalhousie University and the Halifax municipality accept compostable material as follows:

Kitchen paper towel and food napkins

Paper bags/sleeves

Paper plates

Paper food wrapping

Parchment paper

Fibre-based or paper compostable food containers

NOT accepted are compostable coffee cups and compostable plastics, including compostable corn-based cutlery.

#### What is Recyclable?

Dalhousie University and the Halifax municipality accept recyclable material as follows:

All beverage containers (e.g. for pop, water, juice)

All plastic containers

Glass bottles and containers

Tin, steel, and aluminum cans

Un-soiled aluminum foil and plates

Plastic bags/wrap including bread bags, bubble wrap, frozen food bags, plastic wrap

NOT accepted are Styrofoam and non-container plastics, including straws, cutlery, bottle caps, and condiment cups. Dalhousie has worked to eliminate Styrofoam from food service packaging.

# **Hot Drink Cups and Lids**

Description	<b>Example Product</b>	More info
Paper cup with plastic lining	Widely available	Goes in the garbage.
Plastic lid	Widely available	Goes in the garbage.
Uncoated paper sleeve	EcoGrip® Cup Sleeves EG-2000	Goes in the organics bin.

Avoid			
	Description	<b>Example Product</b>	More info
	Styrofoam cup		Hard to recycle material; especially dangerous litter item.
	Compostable plastic lid		Can contaminate recycling system; not accepted at municipal composting facilities.

#### **Cold Drink Cups and Lids**

Choose
